

The “Hochschule Konstanz – University of Applied Sciences” is proud to host the first international 5D Conference with special focus on application. The subject, “applying 5D model-based process integration in practice” describes one of our main goals. As a University of Applied Sciences applying theoretical concepts to practice is our primary vision.

Thus in the department of Civil Engineering, applying 5D model-based process integration is a special focus in teaching, learning and research.

Hochschule Konstanz University of Applied Sciences (HTWG) is a modern technical university with a hands-on approach which focuses on interdisciplinary instruction and integrating theory and practice throughout the curriculum. Our primary mission is to educate talented men and women in engineering, science, design, and management in preparation for careers in professional practice.

We offer a wide spectrum of subjects and aim to provide meaningful educational and life experience opportunities to our students. Students are given individual counselling and advice, and encouraged to gain international experience through internships and educational exchanges. We are an active partner in research and development, transfer of technology, and continuing education for committed, motivated individuals, as well as innovative businesses.

We are committed to creating a diverse, inclusive, and family friendly learning environment. Accordingly, we continually seek to forge new ties globally and develop infrastructure to cultivate diversity within our university community.

We hope to establish in cooperation with the 5D initiative a tradition of Conferences on the subject of the Application of 5d models in practice at Konstanz. We look forward to seeing you next time!

Dr. Kai Handel
President
