

Course number: 14AIN23050
Individual Project Work in IT
Security for Exchange Students
Study Level: Bachelor /
Undergraduate

Prof. Dr. Hanno Langweg
Language of instruction: English
ECTS Credits: TBD, e.g. 10 or 20

Objectives:

After completing the course the student will have experience from working individually (or in a group) to solve a challenging development problem. Students will be able to select and use tools necessary to solve the problem, develop and assess alternative solutions, and document results in a project report. Students will develop a positive attitude to working in a problem-oriented way and are familiar with relevant codes of ethics and professional conduct.

Contents:

The topic of the project is to be defined by the advisor prior to the start of the project. The project should address challenging development problems in IT security.

Assessment:

Assessment of this course will be based on the results of the project, typically an artifact and a report.
